SUMMARY

Full stack developer and Software Engineering graduate with hands-on experience building production-style POS, inventory, and e-commerce systems using React and Node.js. Delivered freelance web and POS solutions for 4+ clients, and independently built a C++ RPG in Unreal Engine 5. Comfortable across the stack: React/JS frontends, Node.js backends, WordPress/PHP builds, and basic data/ML tooling in Python.

SKILLS

- **Frontend:** React, JavaScript, HTML5, CSS3, Bootstrap, Three.js
- **Backend:** Node.js, PHP, Python
- **Languages:** Java, C++, Python, JavaScript
- **Web/CMS:** WordPress, WooCommerce
- **Data/ML (basics):** Pandas, Scikit-learn, TensorFlow, OpenCV, Streamlit
- **Tools:** Git, GitHub, Figma

PROFESSIONAL EXPERIENCE

Freelance Web & POS Developer

Jan 2022 – Present

- Built and delivered full-stack POS and web systems for 4 freelance clients, covering sales, billing, inventory, and user management.
- Developed responsive, user-friendly websites using WordPress, HTML, CSS, JavaScript, and PHP.
- Managed full project lifecycle directly with clients: requirements gathering, development, and delivery.

Freelance Graphic Designer

Jan 2024 – Present

- Designed social media posts, banners, thumbnails, and branding materials for freelance clients.
- Created promotional design assets for events, companies, and marketing campaigns.

PROJECTS

Hospital/Pharmacy POS & Inventory System | React, Node.js

- Built a dedicated full-stack POS and inventory management system for medical stores and hospital pharmacies.
- Implemented medicine management, billing, stock tracking, low-stock alerts, reporting, and role-based access control.

GitHub: github.com/toqeer-azam

3D Café Ordering Web Application | React, Three.js

- Built an interactive café ordering web app with real-time 3D animations for an immersive browsing experience.
- Implemented order placement and pickup-option selection flows entirely on the frontend.

GitHub: github.com/toqeer-azam

Hack-and-Slash RPG (Final Year Project) | C++, Unreal Engine 5, Blueprints

- Built a functional Hack-and-Slash RPG game as a Final Year Project using Unreal Engine 5, C++, and Blueprints.
- Implemented combat mechanics, character controls, AI, animations, and gameplay/UI systems.

GitHub: github.com/toqeer-azam

Other Projects

- **General POS Software** — Adaptable POS system for sales, billing, inventory, and user management across business types.
- **E-Commerce Website (WordPress, WooCommerce, PHP)** — Custom theme e-commerce site with product management and integrated online payments.
